

Agreement with CLIP+DINO visual consensus

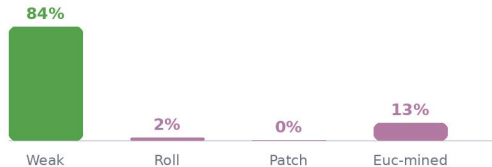

Reference distance is the average of z-scored CLIP and DINOv2 cosine distances over controlled candidates.

A Agreement scores

128 generated anchors; candidates are weak view, roll mix, patch shuffle, and Euc-mined impostor.

B CLIP+DINO reference top-1 distribution

Interpretation

MS-stat improves pairwise agreement by 2.3 points.

MS-stat improves top-1 reference match by 10.2 points.

This supports the metric only in the controlled layout-trap regime;
broad same-class retrieval should be reported separately.
